

# Saving for retirement

## Compound interest makes for a better return

If you regularly pay CHF 6 000 into Savings 3 until you are 65, the following table shows the amount you will have saved, plus interest and return, depending on the age at which you started the savings process.

**Your age at the start of the savings process** (annual investment of CHF 6 000, rounded to the nearest CHF 100, savings process until 65)

### Conclusion

With regular payments from a young age, the third pillar can make a substantial contribution to the provision made for the third phase of your life. The table and graph provide an excellent presentation of the effect of interest/return. If you make regular monthly payments into a retirement fund, you also profit from the average price effect.
